CHADIS is an online Clinical Process Support System providing assistance for the complete clinical process through: pre-visit online data collection; moment of care decision support; post visit patient engagement with individualized patient education and monitoring; post-visit clinician education.

Benefits to Your Practice

Provide Enhanced Patient Care
- CHADIS enables families to list their concerns and goals before the visit, thus improving patient-centered care.
- CHADIS screening tools and questionnaires fulfill American Academy of Pediatrics (AAP) recommendations and Bright Futures guidelines for routine care.
- Uses evidence-based tools to accurately identify problems and provides real-time suggestions for appropriate clinical response.

Improve Office Workflow
- Pre-visit data collection allows clinicians to focus on addressing patient concerns and visit agenda.
- Online screening saves office staff time – no more paper and manual scoring of the ASQ-3\textsuperscript{TM}, M-CHAT-R\textsuperscript{TM}, and Vanderbilt Assessment Scales, among over 200 tools.

Increase Practice Income and Enhance Reputation
- Powering your practice with the best in today’s information technology shows your commitment to evidence-based, patient-centered care.
- Increase practice income with developmental and health screening tools eligible for 96110, 96127 and 99420 billing to insurance or Medicaid.
- CHADIS provides documentation generated by the patient verifying visit complexity for higher-level codes.

Maintenance of Certification Assistance
- Earn Part 4 Maintenance of Certification (MOC) credits using CHADIS for autism, developmental screening and other topics.
- Automated data collection and tracking for Quality Improvement (QI) programs.

Practice Level Certification Assistance
- CHADIS can provide data and reports to help with Meaningful Use criteria, Medical Home, Community Health Needs Assessments and other federal requirements.

How CHADIS Works

1. CHADIS delivers pre-visit questionnaires to families.
2. Provisional diagnoses, scores and links to decision support tools are provided.
3. Results inform clinician discussion with the family for shared decision making.
4. Patient report may be printed for chart or included in electronic health record (EHR).
5. CHADIS documents clinician comments and decisions.
6. Patient specific resources and developmental milestones populate the patient’s MemoryBook Care Portal.
CHADIS will be an important part of the future of pediatrics.

Dr. David Bergman, Associate Professor of Pediatrics, Stanford University, Pediatric Academic Societies Annual Meeting.

Key Features

Comprehensive Collection of Questionnaires
More than 200 screening and diagnostic tools are available for assessing development, autism, mental health, general medical care, family and environmental factors. By request, CHADIS will program questionnaires, tools or forms specific to your practice. We likely have what you need!

Multi-lingual Capability
Respondents may view the CHADIS interface in English, Spanish and Mandarin Chinese. Core questionnaires are available in Spanish, French and some in Mandarin Chinese.

Clinical Decision Support
Patient-Specific Templates (PSTs) are clinical interfaces integrating questionnaire results in a guideline-informed format. PSTs facilitate documentation of evidence-based care for specific health conditions and provide decision support.

Development and Autism Screening Follow-up CHADIS automatically presents M-CHAT-R Follow-up™ upon M-CHAT-R™ failure as well as age appropriate ASQ-3™ handouts for developmental stimulation.

CHADIS e-Textbook has chapters available by links from the patient’s provisional diagnoses.

CHADIS Resources
CHADIS includes an extensive database of resources for families and clinicians ranging from local agencies to national websites, books and educational handouts. Resource listings are linked to screening results, searchable by clinicians and families and saved in the MemoryBook Care Portal.

MemoryBook Care Portal
CHADIS’s MemoryBook Care Portal is prepopulated by patient milestones from screenings where photos or comments may be added or shared. Child-specific health alerts and notices from the doctor are included.

The Founders of CHADIS

Barbara Howard, MD
- President, Total Child Health Inc. and co-founder of CHADIS.
- Assistant Professor of Pediatrics, The Johns Hopkins University School of Medicine.
Dr. Howard is a developmental-behavioral pediatrician, past president of the Society for Developmental and Behavioral Pediatrics and a contributing author for Bright Futures and DSM-PC. She has served on national committees of the American Academy of Pediatrics and is a popular speaker across the country.

Raymond Sturner, MD
- Director of the Center for Promotion of Child Development through Primary Care and co-founder of CHADIS.
- Associate Professor of Pediatrics, The Johns Hopkins University School of Medicine.
Dr. Sturner is a developmental-behavioral pediatrician and the former Director of the Developmental and Behavioral Pediatrics Fellowship Training Program at The Johns Hopkins University School of Medicine. He was previously Director of the Child Development Unit at Duke University, and has been the principal investigator (PI) or Co-PI of over 100 grant awards.
